| <b>PRODUCT</b>                            | <b>BRADERM AXATOPIC CREMA</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>PACKAGING</b>                          | <b>250 ml BOTTLE</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>CATEGORIA</b>                          | <b>DERMOCOSMETICO</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>INDICATIONS</b>                        | Rich emulsion ideal for dry or atopic skin, enriched with natural and prebiotic oils.<br>With a dry and silky texture it moisturizes the skin without greasing.                                                                                                                                                                                                                                                                                                                                                    |
| <b>DIRECTIONS FOR USE</b>                 | Apply several times a day as needed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>NICOTINAMIDE<br/>1%</b>                | Its anti-inflammatory action is based on multifactorial mechanisms: it inhibits histamine release, inhibits leukocyte chemotaxis and interleukin synthesis.<br>It also has a stabilizing effect on the skin barrier, normalizing the production of epidermal sphingolipids, in particular of ceramides. It has a good moisturizing action and is well tolerated by the skin.                                                                                                                                       |
| <b>BIOLIN-P®<br/>1%</b>                   | Innovative ingredient based on Prebiotics. Inulin and alpha-glucoligosaccharides are an important support for the development and proliferation of skin microflora.<br>The cutaneous microbiota represents a key element in the skin protection system against aggressions by pathological agents and environmental stressors.                                                                                                                                                                                     |
| <b>PERILLA OIL<br/>0.5%</b>               | Natural oil rich in mono and polyunsaturated fatty acids, phytosterols, polyphenols and antioxidants such as vitamin E. Perilla oil is one of the richest vegetable sources of alpha linoleic and linolenic acid (omega 3, omega 6).                                                                                                                                                                                                                                                                               |
| <b>AENOTERA OIL<br/>0.5%</b>              | Precious ingredient ideal for the formulation of products for delicate, dry and atopic skin as it represents a rich source of essential fatty acids. It is considered a safe and non-irritating ingredient.                                                                                                                                                                                                                                                                                                        |
| <b>CERAMIDES AND CHOLESTEROL<br/>0.5%</b> | Ceramides and cholesterol are lipid substances, main constituents of the lipid barrier.<br>From the chemical point of view the ceramides are formed by a sphingoid base (sphingosine or phytosphingosine) bound to a fatty acid by amide bond.<br>Ceramides and cholesterol are found naturally in cell membranes and are also one of the main components of the stratum corneum, where they occupy the interstitial spaces between the cells cementing them together and helping to keep the skin barrier intact. |
| <b>ALOE VERA GEL<br/>5%</b>               | Ingredient of natural origin consisting mainly of polysaccharides, it has always been considered an active ingredient of fundamental importance in the processes of skin regeneration. It also has a moisturizing and soothing, decongestant and anti-inflammatory effect.                                                                                                                                                                                                                                         |
| <b>SHEA BUTTER<br/>2%</b>                 | Natural emollient with a moisturizing action thanks to the presence of polyphenols, vitamins and essential fatty acids.                                                                                                                                                                                                                                                                                                                                                                                            |
