formula

PRODUCT	BRADERM MICOBAT CREMA
PACKAGING	AIRLESS BOTTLE 50 ml
CATEGORY	COSMETIC
PRINCIPI ATTIVI	ITRACONAZOLE 0,2% Its mechanism of action takes place on the cytoplasmic membrane of the fungus by inhibiting the action of cytochrome P450 and consequently blocking the synthesis of ergosterol which represents the main steroid component of the cytoplasmic membrane with consequent rupture. Latest generation antifungal with broad-spectrum activity. CICLOPIROX OLAMINE 0,5% It belongs to the hydropyryd family. CPO has a strong antifungal and antibacterial action, blocks the production of ATP (adenosine triphosphate), an energy reserve necessary for the vital functions of the fungal cell. It blocks carriers that transport leucine, valine and phenylalanine, disrupting mRNA and protein synthesis. In addition, CPO binds and subtracts FE+++ by inactivating cellular enzymes, resulting in the death of fungi and bacteria. CPO is recognized as having an important anti-inflammatory action as it inhibits inflammatory mediators originating from arachidonic acid by the action of 5 alpha lipoxigenase. BISABOLOL 0,5% Soothing and anti-reddening action, eliminates skin inflammation, exerting a softening effect, especially useful on particularly delicate, irritated, damaged skin. Extremely tolerable skin. SHEA BUTTER 1% Natural emollient with a moisturizing action thanks to the presence of polyphenols, vitamins and essential fatty acids. It moisturizes the skin and creates a natural barrier against external aggressions. NIACINAMIDE (VIT. PP) 5% • It is considered a valid agent in the treatment of <u>inflammatory skin diseases</u> caused by the formation of antibodies. • It has an antioxidant action, because it is an important component of coenzymes that participate in the transport of oxygen • Has a negative effect on sebum production • Increases keratin synthesis, stimulates ceramide synthesis, accelerates keratinocyte differentiation with improved dermal-epidermal function • Increases skin hydration ICHTHYOL 0,5% new 2025 Ichthyol is obtained through the dry distillation of bituminous shale (particular types of sedimentary rocks), containing residues of fossil fish and marine animals. Keratoplastic, antiseptic, antiseborrheic, resolving, anti-inflammatory and decongestant properties are attributed

to this compound.

ZANTHALENE 0,5% new 2025

Created from Zanthoxylum bungeanum, commonly known as Sichuan pepper, Zanthalene® is a cosmetic ingredient derived from spices and capable of acting on neuromuscular communication within the skin structure, providing well-aging effects and soothing benefits.

Calms and soothes discomfort of the skin and scalp,
Provides immediate relief,
Provides wellness benefits of aging.

CERASKIN O 1% new 2025

CeraSkin O is a revolutionary Bioavailable Ceramide. The ceramides contained in CeraSkin are human-identical "Ceramide NP" obtained from biotechnological yeast fermentation processes, which have the same configuration as human ones, which makes them particularly efficient. Ceramides, along with cholesterol and fatty acids, are the main lipid components of the stratum corneum and help create the skin's so-called "lipid barrier," a multilamellar structure that protects the skin and maintains its moisture level. A reduction in ceramide content is the direct cause of various skin problems, from aging to psoriasis, atopic dermatitis, acne.

Ceraskin O rebuilds intercellular lipids to strengthen this skin barrier by providing protection from external damage, preventing water loss, strengthening the moisturizing ability resulting in skin tightening, reduction of wrinkles and fine lines.

NEW 2025: A slight balsamic fragrance has also been included

DESCRIPTION

Micobat Cream is useful in the treatment of seborrheic dermatitis of the face and trunk, moreover, given its active ingredients, it allows good results to be obtained on infections of bacterial and fungal origin.
