

PRODUCT	BRADERM TRAMEXAL
PACKAGING	AIRLESS 30 ml
CATEGORY	DERMOCOSMETIC
INDICATIONS	Emulsion for the face based on Tranexamic acid and Kojico. The formula is enriched with active ingredients able to illuminate and even out the skin of the face and counteract skin hyperchromia, preventing its formation.
TRANEXAMIC ACID 2%	The mechanism by which tranexamic acid is able to depigment seems to be the inhibition of plasminogen binding to keratinocytes (surface cells of the epidermis). This in turn would decrease the formation of arachidonic acid which results in fewer prostaglandins and leukotrienes. This decrease in inflammatory mediators has an inhibitory effect on the tyrosinase enzyme that regulates the formation of melanin pigment.
KOJIC ACID 0,7%	Kojic acid is used for the formulation of cosmetic products with a depigmenting and uniforming action of the complexion, useful in the treatment of melasma, solar lentigo, senile lentigo and other hyperpigmentation disorders of acquired origin. It therefore acts in synergy with Tranexamic Acid to reduce stains.
RETINOL PALMITATE 0,2%	At the epithelial tissue level, it plays a fundamental role in keratinocyte cell differentiation processes and thanks to the induction of collagen and elastin synthesis, it is effective in preventing photo-aging. Active ingredient with an exfoliating and regenerating effect, it carries out an action aimed at cell renewal with an antioxidant effect which counteracts the action of free radicals. Thanks to its keratolytic action, it allows tranexamic acid and kojic to reach the areas of the skin where the excessive production of melanin is concentrated.
SODIUM HYALURONATE 0,2%	Very effective cosmetic active even in small doses, it is known for its intense moisturizing and plumping power. It boasts moisturizing, anti-dehydration, anti-aging properties.
VITAMIN C PALMITATE 0,2%	Strong antioxidant and anti-radical action, it protects the skin from the toxic and irritating effects produced by solar radiation and environmental pollution.
SYMWHITE PLUS 5%	It is a complex based on bisabolol and phenylethyl resorcinol which makes the skin luminous, evens out the skin tone and improves the complexion.
KARITE' SHEA BUTTER 1%	Shea butter nourishes and deeply hydrates, gives elasticity and tone to the skin, promotes the production of collagen, forms

	a protective film on the skin that protects it from external aggressions, has anti-inflammatory, antiseptic and protective properties.
VITAMIN E ACETATE 0,5%	Vitamin E acetate is known for its emollient and highly soothing properties, it keeps the skin smooth and soft and limits the loss of water from the epidermis, preserving skin hydration. It is also an excellent anti-free radical and elasticizer for all skin types.
DOSAGE	Apply the cream directly on the spot to be treated 2 times a day, until it disappears completely. If applied during the day, also use a sunscreen.
