

PRODUCT	AZEKUR
CATEGORY	DERMOCOSMETIC
FORMAT	Airless 30 ml
DESCRIPTION	Dermocosmetic treatment formulated with specific active ingredients for acne-prone adult skin. Based on Hydroxypincolone Retinate (HPR), new generation retinoid, nicotinamide and azelaic acid. The formula is enriched with zinc, ceramides, white willow extract and a postbiotic that stimulate cell renewal without irritating and regulate sebum production by restoring the normal hydrolipidic film and restoring barrier function.
ACTIVE INGREDIENTS	
AZELAIC ACID 10%	Azelaic acid is a versatile cosmetic ingredient and for this reason it is indicated for the treatment of countless skin diseases such as rosacea, acne and hyper-pigmentation, as well as having an antioxidant action that makes it perfect for anti-aging formulations. It also helps the skin to regenerate more quickly, thus promoting cell turnover and reducing the appearance of pimples and blackheads. The activities in detail of azelaic acid: Antibacterial activity: recent studies have shown that azelaic acid is able to reduce the presence of bacteria on the skin, including Staphylococcus epidermidis and Propionibacterium acnes, now better known as Cutibacterium acnes, a bacterium involved among the many causes of acne. All this contributes to the prevention of the formation of new acne lesions. Keratolytic and exfoliating activity: Azelaic acid has an effect on epidermal keratinization and leads to a decrease in the thickness of the stratum corneum. By removing the most superficial layer and stimulating the natural turnover of the skin. Depigmenting activity: azelaic acid inhibits tyrosinase, the enzyme responsible for the synthesis of melanin, the pigment that gives color to the skin, hair and eyes. It therefore exerts a lightening effect useful for improving the appearance of dark spots caused by sun exposure, aging or previous inflammation such as spots and post-acne lesions. Antioxidant activity: It has antioxidant properties that help protect the skin from damage caused by free radicals. Protecting cells and structures sensitive to oxidation and preventing premature aging. Anti-inflammatory activity: Azelaic acid has been shown to have anti-inflammatory properties, which can help reduce inflammation associated with acne

	and other skin disorders. In particular, however, it is an effective active ingredient for the treatment of rosacea, as it soothes redness, irritation and dilated capillaries. With its multiple actions, azelaic acid is therefore confirmed as an essential ingredient for healthy and radiant skin, suitable to meet the needs of anyone who wants to achieve visible and lasting results in their skin care.
AZELOGLYCINE 5%	Azeloglicin (derivative of azelaic acid and glycine) is a powerful cosmetic active that acts effectively on oily, blemished, acne-prone or blemished skin. It regulates sebum production, reduces redness and lightens skin spots (hyperpigmentation). Thanks to glycine, it hydrates and improves e-elasticity, making it gentler than pure azelaic acid. Key Benefits of Azeloglycine: Sebum-regulating and Anti-acne action: Reduces excess sebum, unclogs pores and counteracts bacterial proliferation, in particular Propionibacterium acnes. Lightening Action: Inhibits the enzyme tyrosinase, reducing dark spots and post-inflammatory hyperpigmentation, evening out the complexion. Soothing effect: Reduces inflammation and redness, also suitable for sensitive skin or skin with rosacea. Hydration and Texture: Unlike other acids, it keeps the skin soft and hydrated, improving barrier function. SYNERGISTIC COMBINATION AZELAIC ACID + AZELOGLYCINE Since one is the derivative of the other, a higher dosage of azelaic acid (main molecule) is achieved but without the risk of irritation.
HYDROXYPINACOLON RETINOATE (HPR) 1% Pure HPR 0,1%	Hydroxypinacolone Retinoate (HPR) acts on acne by normalizing keratinization and reducing inflammation. It helps to exfoliate dead cells, prevent clogging of pores, decrease sebum production and counteract the bacterial proliferation of Cutibacterium acnes. HPR also promotes cell renewal, improving skin texture and reducing post-acne lesions and spots. How Hydroxypinacolone Retinoate works on acne: Keratinization normalization: It helps to regulate the process of formation and desquamation of skin cells, preventing the accumulation of dead cells that can clog the pilosebaceous follicles. Sebum-regulating effect: Reduces excessive sebum production, helping to control shiny skin and prevent the formation of blackheads and acne lesions. Anti-inflammatory action: Reduces redness, swelling, and inflammation associated with acne lesions. Cell renewal: Accelerates cell turnover, facilitating the elimination of dead cells and promoting the regeneration of new, healthy cells. Anti-bacterial activity: Helps limit the proliferation of the bacterium Cutibacterium acnes, responsible for part of the acne inflammatory process.

NICOTINAMIDE 5%	Niacinamide is often used in products dedicated to the treatment of oily, seborrheic or acne-prone skin due to its ability: Sebum-regulating: by reducing the size of the pores, it makes the skin texture more homogeneous; Anti-stain: reduces red spots left by comedones; Antimicrobial: nicotinamide exerts an antimicrobial action against <i>Propionibacterium acnes</i>, a microorganism that is found in greater quantities in acne patients; Anti-inflammatory: particularly useful action for soothing acne-prone skin.
PUREBLOME (Bacillus ferment) 2%	PUREBLOME™ is a natural postbiotic developed by Provital with Triplobiome™ technology that has triple efficacy on acne-prone, oily and mature skin. It works by reducing inflammation and blemishes, controlling sebum production, and regenerating the skin. It is a completely natural and vegan COSMOS certified ingredient derived from an ecologically grown endophytic bacterium (<i>Bacillus velezensis</i>). How PUREBLOME™ works Anti-inflammatory action: Reduces signs of inflammation and acne lesions, helping to rebalance the skin microbiome. Sebum-regulating action: Decreases sebum production, helping to keep the skin dull and preventing pore clogging. Regenerating action: Promotes cell renewal and improves the function of the skin barrier, making the skin healthier.
HYMAGIC 4D (Hyaluronic Acid 4 Molecular Weights) 1,5%	Hymagic-4D, a combination of four types of HA with different properties, is able to build and form a three-dimensional network and precisely target the different layers of the skin, to replenish water from the outside and retain it from the inside. In this way, the skin is fully hydrated and improves elasticity directly from the inside.
CERAMIDES 1%	Ceramides belong to the category of regenerating ingredients. Since they are already naturally present in our skin, they are suitable for all skin types, even the most sensitive, prone to irritation or oily. They are also safe to use around the eyes. They also bring numerous benefits to skin prone to impurities, as they contribute to the renewal and strengthening of the skin barrier. In fact, research shows that a damaged skin barrier can further contribute to the aggravation of pimples and acne. That's why ceramide moisturizers are also a great choice for acne-prone skin – make sure you choose the right products for your skin type, i.e. lighter textures for oily and combination skin and richer textures for normal to dry skin.
SHEA BUTTER 0,5%	Shea butter acts as a natural anti-inflammatory mainly due to its internal composition. The presence of cinnamic acid (and of one compound in particular, cannellate lupeol) triggers a slowdown in the production of cytokines and other cells responsible for inflammation and inflammatory eruptions at the subcutaneous level. This mechanism can help reduce irritation caused by environmental factors, such as dry weather, and

	inflammatory skin conditions, such as eczema, and sometimes even potentially help avoid skin changes such as acne.
ZINC PCA 0,5%	The effectiveness of Zinc PCA on the skin comes from the synergistic combination of zinc, an essential mineral, and PCA (pyrrolidine carboxylic acid), a component of the skin's natural moisturizing factor (NMF). Sebum regulation: Zinc PCA significantly reduces the activity of the sebaceous glands, helping to control excess oil and reduce the shiny effect on the skin. Antibacterial Action: Inhibits the proliferation of acne-causing bacteria, such as Propionibacterium acnes, helping to prevent the formation of pimples and blackheads and reduce existing blemishes. Anti-inflammatory Properties: Soothes irritated skin and reduces redness associated with inflammation, acne, and rosacea, supporting skin barrier repair. Hydration: Unlike other mattifying agents, it does not dry out the skin. The PCA component acts as a natural humectant, helping to retain moisture in the epidermis and keep the skin hydrated and supple. Healing Support: Supports skin repair processes and can help reduce the visibility of post-inflammatory spots (acne marks).
E.S. WHITE WILLOW 0,05%	The acid extracted from the white willow is a real skin wizard, able to successfully address a wide range of skin problems. Salicylic acid is effective for combating acne or if you simply want to clear your pores of impurities and blackheads.
Chemical UV filters SPF 30	
HOW TO USE	Apply the product to thoroughly cleansed facial skin with a gentle cleanser, once or twice a day and massage gently until completely absorbed. Avoid the eye area.
