

PRODUCT	CONTORNO OCCHI BRADERM
PRIMARY PACKAGING	DISPENSER 30 mL
CATEGORY	DERMOCOSMETIC
INDICATIONS	Treatment of the eye area. Anti-fatigue action in case of bags and dark circles, counteracts the signs of skin aging.
Active ingredients	
CORNFLOWER WATER 1%	Precious natural ingredient capable of restoring shine, hydration and a brighter appearance to the eye area. Thanks to the presence of some molecules with a decongestant action, it is able to hydrate the skin and make it more elastic.
HYALURONIC ACID 1.5%	Naturally present in the skin, it maintains the water supply especially in dry skin or skin that tends to mark. Fundamental ingredient to prevent the formation of the first wrinkles and keep the skin relaxed.
GLYCACID ECO® 0.5%	Glycacid Eco is a biotechnological derivative of plant materials, and is composed of very low molecular weight hyaluronic acid precursors (hydrolysed glycosaminoglycans). Glycacid Eco helps to improve intradermal penetration, also constituting a starting raw material for the physiological formation of medium molecular weight hyaluronic acid. This type of Hyaluronic Acid is particularly suitable for retaining water in the fundamental layer of the dermis and in the connective tissue (and therefore responsible for deep hydration).
EYE SERYL 0,5%	A tetrapeptide with proven efficacy against puffy eye bags. Helps to inhibit glycation, vascular permeability and lipid accumulation, as shown in vitro, suggesting improvement in the under eye region. The presence of bags and dark circles decreased in vivo.
ARGIRELINE 0,5%	With a mechanism of action similar to that of the botulinum toxin, the peptide has a tightening effect on the epidermis.
CAFFEIN 0,1%	Caffeine exhibits powerful antioxidant properties in fact it helps protect skin cells from the photoaging process. It is a vasoconstrictor, therefore, when applied to the eye contour area, it makes the capillaries under the skin that cause dark circles less visible. It is also a good sunscreen and can defend the very fine capillaries from potential damage from UV rays.
ELASTIN 1%	Elastin is a skin protein, mainly composed of some amino acids such as glycine, valine, alanine and proline, produced by the fibroblasts of the dermis, which have the precise task of producing collagen and elastin, responsible for maintaining the elasticity and firmness of the skin. Elastin represents about 2% of the weight of the dermis and is produced as a simple molecule which, by joining with other molecules or polymers, forms a three-dimensional lattice. This lattice gives the skin its typical elasticity. Fibroblasts, very numerous at a young age, decrease over time, and it is for this reason that, over the years, the skin ages, losing its elasticity. Elastin therefore guarantees the skin the elasticity necessary to withstand the typical mechanical tensions and deformations to which the skin is subjected over the course of a lifetime, always returning it to its original state.
ESCINA 0.01%	It has an anti-edema, vasoprotective and antioxidant action. It works by strengthening the structure of the blood vessel. The blood vessels are protected and regain their normal resistance and permeability, reducing and improving oedema, especially in the case of dark circles.
HOW TO USE	Apply a drop of product to the eye contour area, massaging gently with your fingers. For optimal application, tap the product with your fingertips to perform a delicate massage and stimulate microcirculation.
