| CATEGORY                   | COSMETIC                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| ACTIVE<br>INGREDIENTS      | <p><b>HYALURONIC ACID 0,10%</b><br/>It is a fundamental component of the connective tissue and gives the skin resistance and shape retention. A lack of it causes a weakening of the skin and the appearance of wrinkles and imperfections. Its presence tends to decrease with age.</p> <p><b>ESCIN 0,40%</b><br/>Escin is a substance with anti-edema and anti-inflammatory activity.</p> <p><b>ARNICA MONTANA 5%</b><br/>It is a plant of the compositae family. It is an extraordinary substance for post-traumatic and bleeding treatment.<br/>Helps to reabsorb edema and blood effusions. Inflammation is a reaction caused by damaged cells, the chemical reactions it produces swell and dilate the tissues which deteriorate in the long run. Arnica is able to reduce the body's response to inflammation and, therefore, restore normal tissue functions by limiting damage.</p> <p><b>VITIS VINIFERA 0,05%</b><br/>Mostly, red autumn leaves are used. In fact, these contain large quantities of ANTOCYANOSIDES with vasoprotective properties both at the level of the arterioles and venules, with consequent strengthening of the MICROCIRCLE.</p> <p><b>TOCOPHERYL ACETATE 0,40%</b><br/>It is a fat-soluble vitamin, has high antioxidant, antimicrobial properties and strengthens the capillary walls.</p> <p><b>MELILOTUS 0,02%</b><br/>It increases lymphatic drainage thanks to the presence of coumarin.</p> <p><b>AESCULUS HIPPOCASTANUM 0,05%</b><br/>Anti-inflammatory and anti-edema action due to the presence of escin and tannins.</p> <p><b>BLACKBERRY EXTRACT 0,06%</b><br/>It promotes the functionality of the microcirculation by improving the resistance of the capillaries and giving relief to tired and heavy legs.</p> |
| THERAPEUTIC<br>INDICATIONS | VENOUS STASIS, PERIPHERAL EDEMA, HEMATIC SPILLS, IN ALL RELATED PROBLEMS TO A MALFUNCTIONING OF THE MICROCIRCLE OF THE LOWER LIMBS, CELLULITE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
