

PRODUCT

BRADERM MICOBAT POLVERE

CATEGORY	DERMOCOSMETIC
ACTIVE INGREDIENTS	CYCLOPYROXOLAMINE (CPO) 0.05 % It belongs to the hydropyryrid family. CPO has a strong antifungal and antibacterial action, blocks the production of ATP (adenosine triphosphate), an energy reserve necessary for the vital functions of the fungal cell. It blocks carriers that transport leucine, valine and phenylalanine, disrupting mRNA and protein synthesis. In addition, CPO binds and subtracts FE^{+++} by inactivating cellular enzymes, resulting in the death of fungi and bacteria. CPO is recognized as having an important anti-inflammatory action as it inhibits inflammatory mediators originating from arachidonic acid by the action of 5 alpha lipoxygenase.
	CLOREXIDINE DIGLUCONATE 0.4% Antiseptic action
	TIOCONAZOLO 0,25% Tioconazole is an active ingredient belonging to the category of imidazole derivatives with a broad spectrum of action that guarantees its therapeutic activity both against yeasts, dermatophytes and fungi and against Gram positive bacteria. Like other antifungals, this active ingredient, applied topically, easily permeates the membranes of microorganisms, accumulating in the cytoplasm and inhibiting the enzyme 14 alpha methyl Lanosterol demethylase, thus determining: 1. Reduced synthesis of ergosterol, a key element for the structure and functioning of the plasma membrane; 2. Accumulation of intermediate metabolites that reduce the activity of the various membrane enzymes, thus resulting in a significant reduction in exchange and energy capacity. All this is achieved without the active ingredient being absorbed systemically, thus limiting the appearance of side effects and adverse reactions.
	ZINC OXIDE 10% It increases the speed of wound healing, thus facilitating healing. Reduces redness, reduces the burning sensation. Anti-inflammatory and antiseptic action.
	SILICON DIOXIDE 1% High absorption capacity, high tolerability due to its mineral

	origin, maintains the elasticity of blood vessels, has anti-inflammatory properties, reduces itching and helps healing by accelerating wound healing. α-BISABOLOLO 0,5% Soothing, anti-inflammatory, anti-itching and moisturizing action. SHEA BUTTER 0,5% Emollient, healing, soothing and re-epithelializing action. Particularly effective in skin dryness, dermatitis, erythema, ulceration and redness in general.
THERAPEUTIC AREAS	• Mycobacterial prophylaxis of the body • Hyperhidrosis • Adjuvant in the treatment of: dermatitis, maceration, sweatamines, tinea pedis and corporis, diaper rashes
