

PRODUCT	OXAGE – crema giorno
CATEGORY	DERMOCOSMETIC
DESCRIPTION	The revolutionary active system of this formulation prevents and reduces the signs of aging, stimulating the vitality of epidermal cells. Thanks to the presence of sunscreens, it prevents the effects of UVA-UVB radiation and pollution, which causes accelerated skin aging. Ideal as a base cream for make-up due to its light texture and moisturizing, anti-radical and protective effect. The formulation has a complex of PEPTIDES and active ingredients with a TENSOR effect and with a remodeling, elasticizing and compacting function.
PEPTIDE SYSTEM:	
SYN-AKE 1,5%	Peptide with a tensor and anti-aging effect, it acts with a prolonged effect by reducing the thickness of facial wrinkles and reshaping the oval. It is a functional anti-wrinkle formed by a <i>synthetic tripeptide</i> , <i>Syn-AKE</i> prevents the fixation of acetylcholine in order to leave the skin relaxed (avoids muscle contraction) and expression lines are greatly reduced.
SYN-TACKS 1%	Innovative functional complex composed of two peptides (tripeptide and tetrapeptide) that interacts with the most important protein structures of the dermal-epidermal junction. It simultaneously stimulates Laminin V, Collagen type IV, VII, XVII and Integrin and consequently improves the tone, firmness and elasticity of the skin. With an elasticizing and compacting action, it acts on the dermal-epidermal junction, strengthening it and assisting the restoration of the normal physiologic conditions of young skin.
ARGIRELINE 1,5%	With a mechanism of action similar to that of botulinum toxin, the peptide has a tensor effect on the epidermis.
GATULINE EXPRESSION 1,5%	Original natural active ingredient that produces an immediate improvement in the appearance of the skin. It acts by mimicking a muscle relaxant action with a relaxing effect on deep and expression wrinkles.
OTHER ACTIVE INGREDIENTS:	
SPF 30	Thanks to the choice of sunscreens with a broad spectrum of action on UVA and UVB rays, it ensures protection against the erythemogenic and phototoxic effects of solar radiation, also guaranteeing an anti-radical and antioxidant effect thanks to the synergistic presence of Vitamin C.
SODIUM HYALURONATE 0,2%	A very effective cosmetic active ingredient even in small doses, it is known for its intense moisturizing and plumping power. It is indispensable in the preparation of creams with a tensor effect, remodeling and anti-wrinkle for the face and décolleté. It boasts

	moisturizing, anti-dehydration, anti-aging properties.
VITAMIN C 0,02%	Strong antioxidant and anti-radical action, it protects the skin from the toxic and irritating effects produced by solar radiation and environmental pollution.
SHEA BUTTER 2%	Its wide use in modern dermatology and cosmetology is due to its healing, emollient, elasticizing, antioxidant, soothing and re-epitalizing properties. But what makes it most precious is the very high content of unsaponifiables, substances essential for maintaining the natural elasticity of the skin as they intervene in the formation of collagen and elastin.
UNSAPONIFIABLE FATS FROM OLIVE OIL 0,5%	A precious multifunctional substance extracted from olive oil, with a strongly protective and emollient action, it assists in protecting against damage induced by solar radiation.
