

PRODUCT	BRADERM ROSAC
PRIMARY PACKAGING	AIRLESS 30 ml
CATEGORY	COSMETIC
INDICATIONS	Facial emulsion adjuvant in case of couperose and rosacea, thanks to the presence of active ingredients that favor the exfoliation process, rebalance the functioning of the sebaceous glands and reduce redness. It acts at the microcirculation level, restoring its functionality. It has a soothing and moisturizing action, protects the skin and gives it greater brightness.
AZELAIC ACID 10%	Azelaic acid has antioxidant properties thanks to its counteracting action against free radicals. It has interesting anti-inflammatory properties and its effectiveness in the context of couperose and rosacea is due to its ability to modulate the inflammatory response at the level of keratinocytes through a series of mechanisms, such as: inhibition of the synthesis of pro-inflammatory cytokines; inhibition of the release of reactive oxygen species (free radicals or ROS) by neutrophils; an action of "scavenger" of free radicals already formed (radical scavenger).
NICOTINAMIDE 5%	Nicotinamide has an anti-inflammatory action based on multifactorial mechanisms: it inhibits the release of histamine, inhibits leukocyte chemotaxis and the synthesis of interleukins. It also has a stabilizing effect on the skin barrier, normalizing the production of epidermal sphingolipids, in particular ceramides. It has a good moisturizing action, and is well tolerated by the skin.
AESCULUS HIPPOCASTANUM 0,5%	Horse chestnut has vasoprotective, anti-exudative and anti-edema properties. Horse chestnut has been shown to have a beneficial effect on blood vessels - in particular, on capillaries and veins.
RUSCUS 0,5%	Numerous clinical observations show that the use of this extract favors the increase in the tone of the venous wall and the resistance of the capillaries; Contains saponins, resins and essential oils that have a vasoprotective, anti-inflammatory, astringent and venotonic action.
VITIS VINIFERA OIL 0,5%	Among the numerous benefits that characterize it, the oil obtained from the seeds of grape berries includes antioxidant, astringent, emollient, dull skin properties. The oil contains in particular linoleic acid, polyphenols and essential fatty acids which are involved in all those processes aimed at counteracting skin aging.
TROXERUTIN 0,3%	Troloxerutin, also known as Vitamin B4, is a bioflavonoid that acts by increasing the resistance of the vessels (capillaroprotective action) and decreasing their permeability, thus preventing the excess passage of the liquid component of the blood to the tissues (anti-waterproofing and anti-edema action). This active ingredient is an excellent adjuvant in soothing and counteracting problems such as

	rosacea and rosacea, in fact it hinders inflammatory processes and the release of free radicals and slows the breakdown of hyaluronic acid.
HYALURONIC ACID 0,15%	Thanks to its high affinity with water, sodium hyaluronate is used as a skin moisturizer and for its barrier effect. In fact, when applied to the skin, it forms a thin film that keeps it smooth and hydrated and protects it from external aggressions.
PHYTOSPHINGOSINE 0,2%	It enhances the skin's natural defensive barriers by supporting the physiologically produced hydrolipidic film and the cutaneous microbiota that inhabits our skin (acts as a natural bacteriostatic).
ISODECIL SALICILATE 3%	It has keratoplastic action, restoring a defense barrier against harmful external agents. In this way the skin is smooth and radiant and the subcutaneous capillaries are better protected and less visible. Thanks to its presence, a compact, flexible and soft stratum corneum is obtained and adequate hydration.
PANTHENOL 1%	Panthenol has chemical-physical characteristics that favor its activity as a moisturizer and emollient. Furthermore, thanks to its ability to improve the skin barrier, it increases its anti-inflammatory, anti-itch and soothing action.
SHEA BUTTER 0,5%	Shea butter nourishes and moisturizes deeply, gives elasticity and tone to the skin, promotes the production of collagen, forms a protective film on the skin that protects it from external aggressions, has anti-inflammatory, antiseptic and protective properties.
WITH GREEN PIGMENT	
HOW TO USE	Apply the cream on the face 1-2 times a day only on the reddened area and gently tap until completely absorbed.
