

|                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PRODUCT</b>                    | <b>FACE, HAND AND DÉCOLLETÉ CREAM</b>                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>CATEGORY</b>                   | <b>DERMOCOSMETIC</b><br>Medium viscous emulsion, with a silky touch and rapid absorption and a precious enveloping fragrance. It is a product that aims to renew the areas of the décolleté and hands, improving their appearance, making them brighter, reducing wrinkles and uniforming the color of the complexion.                                                                                                                         |
| <b>SODIUM JALURONATE<br/>0,2%</b> | Very effective cosmetic active even in small doses, it is known for its intense moisturizing and plumping power. It is indispensable in the preparation of creams with a tensor, remodeling and anti-wrinkle effect for the face and décolleté. It boasts moisturizing, anti-dehydration, anti-aging properties.                                                                                                                               |
| <b>COCOA BUTTER<br/>1%</b>        | Cocoa Butter is obtained by pressing shelled seeds and is one of the most stable fats known, thanks to the percentage of natural antioxidants which prevent it from turning rancid. Provides a barrier that helps maintain and restore moisture that skin loses due to cleansing and exposure to the elements. It has emollient and repairing properties.                                                                                      |
| <b>TRANEXAMIC ACID<br/>1%</b>     | The mechanism by which tranexamic acid is able to depigment appears to be the inhibition of plasminogen binding to keratinocytes (surface cells of the epidermis).<br>This in turn would decrease the formation of arachidonic acid which results in fewer prostaglandins and leukotrienes.<br>This decrease in inflammatory mediators has an inhibitory effect on the tyrosinase enzyme which regulates the formation of the melanin pigment. |
| <b>BETAINE ANHYDROUS<br/>1%</b>   | Betaine anhydrous is an amphoteric compound derived from sugar beets.<br>Its applications in cosmetics concern the moisturizing function thanks to the molecule's ability to retain water to which a marked soothing action is added                                                                                                                                                                                                           |
| <b>ARBUTINE<br/>1%</b>            | Arbutin is a glycoside of particular cosmetic and medicinal interest. Applied topically, it inhibits tyrosinase by reducing the synthesis of melanin (anti-stain action). Arbutin works by inhibiting the activity of tyrosinase, competing with tyrosine for the same receptors. In this way, arbutin blocks the melanin biosynthesis processes right from the start and prevents the migration of melanosomes towards the keratinocytes.     |
| <b>BAKUCHIOL<br/>0,5%</b>         | Bakuchiol is the first natural alternative to retinol.<br>Although it has no structural resemblance to retinol, it has been found to have the functions of the latter without presenting its side effects; Bakuchiol is in fact able to significantly reduce roughness and dryness, attenuate fine lines and wrinkles, improve the tone, elasticity, compactness and luminosity of the skin.                                                   |

|                                |                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SKINECTURA</b><br><b>2%</b> | Active derived from the nectar of a native Australian plant (Anigozanthos flavidus extract), with a redensifying, anti-loss of tone, anti-wrinkle action.                                                                                                                                                                                                                                |
| <b>VITAMIN C</b><br><b>1%</b>  | Vitamin C contained in anti-aging creams and serums prevents oxidative stress, capturing free radicals and transforming them into species less reactive. The topical use of vitamin C helps to contrast premature aging, stimulates the activity of fibroblasts and intervenes in the synthesis of collagen; vitamin C also brightens the complexion and minimizes hyperpigmented spots. |
| <b>HOW TO USE</b>              | Apply one or two knobs of product on hands, neck and décolleté, massaging gently until completely absorbed                                                                                                                                                                                                                                                                               |
