

PRODUCT	BRADERM VIXAGE Vitamin C 30% Serum
PACKAGING	DROPPER 30ML
CATEGORY	DERMOCOSMETIC
ACTIVE INGREDIENTS	VITAMIN C 30% After the age of 20-25 the skin's ability to neutralize free radicals begins to decrease. These reactive compounds contribute to cellular aging and accumulate in tissues, causing a variety of damages, such as wrinkles. Vitamin C contained in anti-aging creams and serums prevents oxidative stress, capturing free radicals and transforming them into species less reactive. The topical use of vitamin C helps to counteract premature aging, especially when it is photo-induced, i.e. caused by exposure to the sun and the harmful effects of ultraviolet radiation. By limiting cellular damage, vitamin C manages, in fact, to control the inflammatory response associated with exposure to UV rays. In cosmetology, vitamin C is also used for its action on connective tissue and on the integrity of blood vessels, as it stimulates the activity of fibroblasts and is involved in the synthesis of collagen (fundamental substance of vascular endothelia). Based on these actions, vitamin C can be recommended as an adjuvant in topical treatments: - Restorative of skin tone and elasticity; - Lightening (on the surface, vitamin C brightens the complexion and minimizes hyperpigmented spots). In skincare routine, vitamin C for topical use is therefore one of the best allies to repair, protect and improve the appearance of the skin. MARINE COLLAGEN 0,2 % It acts similarly to type I and II collagen in the human body, i.e. it is effective for: - ensure the beauty of the skin; - act positively on the cartilage level; - exert an effective anti-wrinkle power; - Promote rapid healing from wounds. Formulated in its hydrolysed form, it is absorbed quickly

	and accumulates in the skin. HYALURONIC ACID 0,2% Moisturizing and filling action.
INDICATIONS	SKIN DYSCHROMIA, UNEVEN COLOR, LOSS OF TONE AND ELASTICITY, EXPRESSION WRINKLES
